[Korean Low Vision Society Lecture]

주제: Life and Visual Disorders

좌장: 김응수 (중앙대), 김훈동 (순천향대)

연제

1. Digital Therapy for Vision Disorders – 강동화 (서울아산병원 신경과)
2. 시야 장애가 삶의 질에 미치는 영향과 개선 방안 – 염혜리 (가톨릭대 은평성모병원)
3. Discussion

Low vision patients undergo severe visual impairments that cannot be corrected by refractive optics or proper ophthalmologic treatment. Loss of vision including low vision interferes with the daily activities of the patients. Furthermore, visual field defects such as hemianopsia can diminish or deteriorate patients' quality of life.

In the first invited lecture, we would like to introduce digital therapy for vision disorder patients from a neurologic aspect. The influence of visual field defects including hemianopsia on the quality of daily life would like to be presented in the second lecture.

In the Korea Low Vision Society Lecture section, we want to provide information to improve the quality of life of patients with low vision and visual field defects and to share recent clinical experiences with a literature review.
